## KATA PENGANTAR

Segala puji kami panjatkan kehadirat Allah SWT yang telah memberikan rahmat, hidayah dan karuni-Nya sehingga Buku Dinamika Pembangunan Berkelanjutan, Kumpulan Tulisan Bunga Rampai ini berhasil diselesaikan dan disajikan sebagai literatur yang memperkaya pemikiran di bidang ekonomi, sosial dan pendidikan.

Buku ini merupakan salah satu Buku Seri Kajian Ekonomi Pembangunan dan Sosial yang diinisiasi oleh Jurusan Ekonomi Pembangunan Universitas Negeri Semarang. Artikel ilmiah pada Buku Bunga Rampai ini merupakan hasil kerja penulis akademisi dari berbagai Universitas di Indonesia, yang dihasilkan dari kegiatan Online Workshop Penulisan Ilmiah Populer Bidang Sosial, Ekonomi dan Pendidikan. Buku ini merupakan salah satu aktualisasi dari berbagai kegiatan Tri Dharma yang dilakukan oleh penulis di tengah pandemi Covid-19 yang melanda Indonesia dan dunia. Kami mengucapkan terimakasih kepada seluruh Penulis yang melahirkan ide gagasan untuk dituangkan dalam buku ini.

Harapan kami, pembaca dapat menikmati dan memperoleh secuil manfaat setelah membaca buku ini. Kekurangan dan ketidaksempurnaan adalah sifat alamiah manusia, demikian pula kami menyadari bahwa dalam menyusun buku ini masih terdapat kekurangan, dan bahkan kesalahan. Saran, kritik dan masukan dari pembaca, sangat kami harapkan. Semoga buku ini dapat bermanfaat, Terima kasih

Semarang, Agustus 2021

## E P I L O G

### PEMBANGUNAN BERBASIS PEMBERDAYAAN MASYARAKAT

Dalam gerak maju perekonomian, kapitalisme dipandang sebagai obat mujarab bagi pertumbuhan ekonomi. Ukuran keberhasilan perekonomian juga dilihat dari rangkaian angka yang menunjukkan volume produksi dan produktivitas. Sehingga para pemangku kebijakan berlomba-lomba untuk mengundang investasi, teknologi, kapital, mendorong pasar yang bersaing sempurna. Tujuannya adalah untuk mencapai cita-cita kapitalisme, yakni efisiensi dan produktivitas.

Pandangan ini mendapat kritik tajam dari ekonom yang berhaluan sosialistik dan institisionalis. Amartya Sen pernah mengatakan bahwa ekonomi ini bukan hanya deretan angka, namun lebih daripada itu. Ekonomi adalah rangkaian upaya untuk mendorong kesejahteraan kolektif. Untuk apa pertumbuhan ekonomi besar jika masih terdapat ketimpangan yang lebar antara golongan kapitalis pemilik faktor produksi dan kelompok marginal.

Oleh karena itu, perlu adanya upaya pemberdayaan dan perlindungan bagi kelompok yang tidak berdaya secara ekonomi. Pada kelompok pinggiran inilah masalah sosial biasanya timbul karena ketidak merataan kue pembangunan. Ide ini membawa kita pada padangan tentang kolektivitas seperti yang sudah didengungkan oleh ekonom berhaluan sosialisme pada pasca revolusi industri.

Pemberdayaan masyarakat melalui dukungan akses, kebijakan dan lain sebagainya ini merupakan salah satu bentuk kepedulian dari pemerintah untuk lebih memeratakan manfaat pembangunan. Semua harus mendapatkan manfaat, seperti cita-cita bangsa Indonesia yang tertuang dalam Alinea pembukaan Undang-Undang Dasar 1945 dan Pancasila yaitu mewujudkan kesejahteraan umum.

Akan tetapi, di tengah sistem ekonomi yang mulai mendekati bentuk pasar persaingan dan individualisme. Implementasi pemberdayaan masyarakat tentu bukanlah hal mudah. Namun sejatinya secara alamiah hal itu bisa dicapai. Simon Kuznet berhipotesa bahwa seiring berjalannya waktu maka ketimpangan yang awalnya tinggi sebagai buah dari pertumbuhan ekonomi yang melaju akan semakin konvergen. Artinya ketimpangan akan semakin rendah. Menurut Sritua Arief, fase ini adalah era kapitalisme matang.

Namun kita tentu saja tidak berharap kondisi ini akan muncul secara alamiah, mengingat untuk menuju *catching up* membutuhkan banyak prasya-

rat. Pemberdayaan masyarakat dan kelompok mikro ekonomi perlu untuk disentuh mulai dari sekarang. Harapannya kelompok ini akan bisa naik level kehidupannya.

Terakhir, mengutip yang dikatakan RH Tawney, orang miskin ini ibarat berdiri di sebuah danau, mereka terendam air hingga leher. Ada gelombang sedikit saja sudah cukup untuk menenggelamkan mereka. Hal ini merepresentasikan kerentanan kelompok marginal. Sehingga perlindungan kepada mereka mutlak harus dilaksanakan. Sebagai bentuk kehadiran pemerintah.

## DEVELOPMENT OF PERFORMANCE IMPROVEMENT OF MSMES IN LOYOK VILLAGE SIKUR DISTRICT EAST LOMBOK REGENCY BASED ON SWOT ANALYSIS

Triana Lidona Aprilani, Fathurrahman, Laely Hurriati

### INTRODUCTION

Micro, Small and Medium Enterprises (MSMEs) are business units that contribute greatly to development, especially in the form of employment and foreign exchange earners. MSMEs function as the foundation of the Indonesian economy that affects the economy, so the existence of MSMEs must be supported by various programs aimed at developing them, both from the government and the private sector (Bismala, 2014). Small businesses and the informal sector have shown their participation in the national economy in various contributions both in terms of macro and micro (Winarni, 2009). MSMEs have an important role in economic development and growth, not only in developing countries such as Indonesia, but also in developed countries such as Japan, the United States and European countries (Mulyanisman, 2012).

MSMEs need attention from the government, because MSMEs are expected to be able to absorb a lot of energy and have a very large number of business units, with the ability to absorb a large and dominant workforce in this business unit, enabling MSMEs to intensively use local natural resources. The existence of MSMEs, which are generally scattered in rural areas, is expected to have a positive impact on employment in rural areas, equity, income distribution, which can indirectly help the government in alleviating poverty in rural communities and reducing the movement of people from rural to urban areas which in the end does not directly help the government improve the welfare of rural communities and reduce urban slums. The problems of MSMEs in West Nusa Tenggara (NTB) Province in general are not much different from the problems experienced by MSMEs in Indonesia, namely: low managerial ability (in terms of production, raw materials, administration, and finance), low commitment in fulfilling customer orders, (in product design and quality, instability in supply and prices of raw materials or other supporting materials) and low access to financing sources. The government has handled this problem through various empowerment

programs for MSMEs, in the form of funding, partnerships, training, mentoring, and others, but empirical facts show that MSMEs in Bali have not developed optimally (Wimba, 2015).

The existence of MSMEs in NTB Province as one of the supporters of the tourism sector is preferred in increasing regional income. The role of MSMEs in this case is to provide added value to increase tourism attractiveness, assist the government in providing tourism facilities and infrastructure, which in turn also contributes to increasing tourism in domestic and foreign tourism. In general, most MSMEs produce products in the form of souvenirs and food for tourists visiting NTB. The development of MSMEs in NTB Province in 2018, is presented in Table 1 below.

**Table 1.** Development of MSMEs in NTB Province in 2018

No	District/City	Business Classification				Total
		Micro	Small	Medium	Large	
1	Mataram	46,328	11,007	632	179	58,146

	Jumlah	582,647	62,952	2,974	414	648,987

Source: BPJS Provinsi NTB (2019)

The data in Table 1 shows that the number of business classifications, whether micro, small, medium, and large, continues to increase. But the absorption of labor, the value of investment, and the value of production decreased. This shows that in general the performance of MSMEs in NTB Province has decreased, so it needs to be critically examined with anticipatory steps so as not to cause more serious problems. The following is the number of Workers in Micro and Small Industrial Enterprises/Companies according to the Standard Classification Code of Indonesian Business Fields, Gender, and Age Group of Workers, 2019 in Table 2.

Source: East Lombok Regency BPJS, Year 2019

Table 2 shows that IMK businesses in NTB Province absorb as many as 261,495 workers and more than 60 percent are female workers. If you look at the distribution of the number of workers, IMK workers on the island of Lombok are 223,086 people (85.31 percent) and the remaining 38,409 people (14.69 percent) are on the island of Sumbawa. This is reasonable because more than 80 percent of the number of IMKs are on the island of Lombok so that the number of workers is also greater. An in-depth analysis of the low performance of MSMEs in Loyok Village, Sikur District is important to do, to find out the weaknesses and opportunities available to improve performance in the following year. One of the analytical tools that can be used to analyze the existence of MSMEs in Loyok Village, Sikur District, East Lombok Regency is a SWOT analysis.

MSMEs in East Lombok Regency consist of 55 types of businesses, grouped into: (1) Craftsmen group consisting of woven craftsmen (eating, bamboo), coconut shell craftsmen, wood carvings, silver crafts, mini jukung craftsmen, and wooden sculptures, (2) Business groups building materials consist of concrete brick industry, brick, padas, taro and trellis/iron fence, (3) food and beverage group consisting of dodol food industry, Balinese snacks, crackers, salt, brown sugar, peanuts, chips, fermented soybean cake , cassava cakes, rice flour, fish processing, coconut oil, packaged drinks, palm wine

processing and food stalls, (4) Textile group consisting of embroidery, screen printing, weaving of garbage bags, convection/tailor and clothing, and (5) Other industries consisting of pillows, kites, paintings, knives and photo copies.

The results of interviews with industry employees and the trade office of Loyok Village, Sikur Subdistrict, show that the craftsman industry group most often receives assistance and support from the government, because this group produces tourism supporting products in the district and absorbs relatively more workers. This condition encourages the SWOT analysis of MSMEs in Loyok Village, Sikur District to focus on groups of craftsmen, weaving, woven bamboo, coconut shells and wood carvings.

#### **Research question:**

1. What are the results of the SWOT analysis on SMEs in Loyok Village, Sikur District, East Lombok Regency?
2. What is the strategy to improve the performance of MSMEs based on a SWOT analysis in Loyok Village, Sikur District, East Lombok Regency?

#### **Research purposes:**

1. Conduct a SWOT analysis of MSMEs in Loyok Village, Sikur District, East Lombok Regency.
2. Develop a strategy to improve the performance of MSMEs based on a SWOT analysis in Loyok Village, Sikur District, East Lombok Regency.

## **LITERATURE REVIEW**

### **A. UMKM**

The definition of MSMEs set by BPS (Central Statistics Agency) is based on the number of workers, for small businesses there are five to nineteen people, while for medium-sized businesses it ranges from twenty to ninety-nine workers (Rahmana, 2009). The definition of MSME above is in accordance with the MSME definition applied to the Asian Development Bank (ADB) (Larasati, 2011). MSMEs have special characteristics that distinguish them from other types of large businesses, including characteristics that distinguish micro-enterprises, small-scale businesses, and medium-sized businesses themselves. More than a third of MSMEs in Indonesia (34.5 percent) are managed by workers aged over 45 years, and only about 5.2 percent of MSME entrepreneurs are under 25 years old (Tambunan, 2009). The workforce needed by small industries does not require high formal education. Most of the workforce needed by industry is based on experience (learning by doing) related to historical factors (path dependence) (Sulistyastuti, 2004). The

entrepreneurial structure according to formal education level shows that there is a positive relationship between the average entrepreneurial education level and business scale, which means that the larger the business scale, which is generally positively related to the level of business complexity that requires high skills and broader business insight, more and more entrepreneurs with tertiary formal education (Tambunan, 2009). Most MSME entrepreneurs reveal the reasons for their business activities having an economic background, meaning that this business is carried out as an effort to increase income and or is a strategy to survive, this condition is caused by the low level of entrepreneurial education.

The MSME business is carried out on the grounds that there is no other type of work that can be done with a relatively low level of formal education (Tambunan, 2009). Some entrepreneurs run their business considering the future prospects of the business, such as the existence of a secure and large opportunity and market share, however, others reveal a hereditary background, which means continuing the family heritage business. Indonesia has many MSMEs, but not all of these MSMEs are legal entities, most of the existing MSMEs, which is about 95.1 percent of the number of business units that are not legal entities, this condition is acceptable on the grounds that most MSMEs have minimal capital and adequate regulations. complicated to get services in business development. The characteristics of SMEs are the use of local raw materials. The existence of MSMEs is often associated with the high intensity of use of local raw materials, for example MSMEs crafted Jepara carving furniture typical of batik from Pekalongan and various other superior local commodities that are used as raw materials in business (Sulistyastuti, 2004).

## B. Performance

Performance can be in the form of individual performances or group work. The performance description involves three important components, namely: objectives, measures and assessments. Determining the goals of each organizational unit is a strategy to improve performance. This goal will provide direction and influence on how work behavior should be expected by the organization for each personnel. Even so, goal setting is not enough, because it requires a measure of whether a person has achieved the expected performance. Factors that affect performance are abbreviated to Achieve which means Ability (ability that can be developed), Capacity (defined/limited abilities), Assistance (assistance for performance realization), Incentives (material and non-material incentives), Environment (employee work environment), Validity (guidelines/instructions and job descriptions) and Evaluation (work feedback) (Notoatmodjo, 2009). Performance is a contextual concept related to the phenomenon being studied, so the measures used to

represent performance are selected based on the observed state of the company. Performance appraisal is an important activity for the company as a process of evaluating all its activities. Performance appraisal is often a problem because performance appraisal is only intended to evaluate and exclude other goals such as the goal of developing competence and individual goals in carrying out tasks and other goals.

### C. SWOT Analysis

SWOT analysis is an analytical technique that identifies various factors systematically to formulate strategies. This analysis is based on logic that can maximize strengths and opportunities but at the same time minimize weaknesses and threats (Lestari, 2014). SWOT analysis is generally used to evaluate opportunities and challenges in the company's internal and business environment (Rahmana et al. 2017). The construction of a SWOT matrix is needed to facilitate the implementation of a SWOT analysis, by combining the factors of strength, weakness, opportunities and threats: The SWOT matrix consists of analysis of: (a) SO (Strength-Opportunities) is to use internal strengths to take advantage of external opportunities, (b) WO (Weakness-Opportunities) which aims to improve internal weaknesses by taking advantage of external opportunities, (c) ST (Strength-Threats) by using internal strength to avoid or reduce the influence of external threats, (d) WT (Weaknesses-Threats) is a defensive strategy directed at reducing internal weaknesses and avoiding internal threats. The preparation of the SWOT matrix consists of eight steps that must be carried out, namely: (a) writing external opportunities, (b) writing external threats, (c) writing internal strengths, (d) writing internal weaknesses, (e) match internal strengths with external opportunities and record SO strategies in the specified cells, (f) match internal weaknesses with external opportunities and record WO strategies in the specified cells, (g) match internal strengths with external threats and record ST strategies in the specified cells, (h) matched internal weaknesses with external threats and recorded WT strategies in defined cells (Amalia et al. 2017). The SWOT matrix is presented in Table 3.

There are four strategies that can be identified from the SWOT analysis matrix presented in Table 3, namely: the first SO strategy which is a strategy to use all the strengths you have to take advantage of opportunities. Second, the WO strategy is a strategy to overcome all weaknesses by taking advantage of existing opportunities. Third, the ST strategy, which is a strategy to use all strengths to avoid threats. Fourth, the WT strategy is a strategy to suppress all weaknesses and prevent all threats.

**Tabel 3.** Matrix of SWOT Analysis

<b>Internal Factor</b>	<b>Strengths (S)</b>	<b>Weakness (W)</b>
<b>External Factor</b>	<b>(List All Of Strengths)</b>	<b>(List All Of Weakness)</b>
Opportunities (O) (List All Of Opportunities)	Strategi SO (Growth)	Strategi WO (Stability)
Threats (T) (List All Of Threats)	Strategi ST (Diversification)	Strategi WT (Defend)

Rahmana, et al (2017)

## RESEARCH METHOD

This research is descriptive research, namely research to determine the value of independent variables, either one or more variables (independent) without making comparisons, or connecting with other variables (Sugiyono, 2009). This type of research is descriptive which describes the strengths, weaknesses, opportunities and threats faced by SMEs in Loyok Village, Sikur District. The types of data used in this study consisted of: primary data, namely data on the strengths, weaknesses, opportunities and threats faced by MSMEs in Loyok Village, Sikur District and information about the groups of Craftsmen who most often received training/guidance from the Industry and Trade District Office. Karangasem. Secondary data is data on MSMEs in NTB Province obtained from the NTB Provincial Industry and Trade Office, data on MSMEs in Loyok Village, Sikur District obtained from the East Lombok Regency Industry and Trade Office.

The data collection techniques used in this study are: documentation, the data obtained by the documentation method in this study is the data of MSMEs in NTB Province and in Loyok Village, Sikur District. Interviews in this study were conducted with the head of the MSME data collection section in Loyok Village, Sikur District. Types of interviews conducted: in-depth interviews, researchers conducted in-depth interviews through semi-formal interviews with research informants, they were owners of MSMEs, especially craftsmen of weaving, woven bamboo, coconut shells and wood carvings. The population is all woven craftsmen, woven bamboo, coconut shell craftsmen and wood carving craftsmen in Loyok Village, Sikur District. Determination of the sample is done by proportional random sampling, which is a sampling method based on the representation of the population distribution in each sub-group, then selecting at the next stage the sample members are randomly selected. Determination of the sample using probability sampling, especially proportional random sampling, using the Slovin formula, the calculation of the number of samples in this study is as follows.

- 2) Maintaining good quality of products by utilizing government training programs.

b) WO (Weakness-Opportunities) Strategy.

This strategy seeks to improve internal weaknesses to achieve external opportunities. The actions taken in this strategy are:

- 1) Participate in training and guidance programs conducted by the government to improve the quality of the workforce and increase product innovation and creativity.

- 2) Develop online marketing programs by optimizing soft loans from Village Owned Enterprises.

c) ST Strategy (Strength-Threat).

This strategy optimizes internal strengths to deal with external threats. The actions taken in this strategy are:

- 1) Win the competition by producing more quality products than competitors.

- 2) Optimizing the use of relatively cheap raw materials and labor to survive in low economic conditions.

d) WT (Weakness-Threat) Strategy.

This strategy minimizes internal weaknesses to deal with external threats.

The actions taken in this strategy are:

- 1) Increase creativity and product innovation.

- 2) Looking for new market share.

## CONCLUSIONS AND RECOMMENDATIONS

The conclusions of the study refer to the results and discussions: (1) the results of the SWOT analysis show the strengths (S) of the craftsman group are: they have raw materials at relatively low prices, labor is always available at relatively low prices, good product quality. Weaknesses of craftsmen are still low in the quality of labor, less innovative product designs and market information is still limited. The available opportunities are to get capital assistance in the form of soft loans from Village-Owned Enterprises, attention from the government in training and mentoring programs. The threats faced by craftsmen are intense competition and low economic conditions. Weaknesses and threats faced by craftsmen motivate craftsmen to keep running their business because on the other hand, craftsmen have the advantage of abundant raw materials at relatively low prices, labor is always available at relatively low prices and good product quality. Another motivator is external opportunities, they are capital assistance funds in the form of soft loans from Village-Owned Enterprises and attention from the government in the form of training and mentoring programs, (2) The results of the SWOT analysis are used as a basis for developing strategies to improve the

performance of craftsmen, they are SO strategies to maintain product quality by utilizing Village Owned Enterprises assistance and training from the government, WO strategies to create online marketing programs and increase product design innovation and creativity, ST strategy to optimize the availability of raw materials and relatively cheap labor to win the competition and WT strategy to increase product design creativity and seek new market share.

Research recommendations are addressed to: (1) Craftsmen must make efforts to improve the quality of the workforce by including them in product innovation training and create online marketing programs, and (2) The government is expected to continue to carry out training and mentoring programs, training should not focus on the production sector but also in the marketing sector by collaborating with other parties such as universities, Village Owned Enterprises are also expected to continue to fund the craftsman business to promote economic growth in the village.
